Wiring Accessories: Supports and Strips

Features and Benefits

- Simplifies wire bundle installation & maintenance
- Multiple fixing points offer convenience and ease of use
- One-Piece design simplifies installation and inventory management
- New generation of very low profile cable support
- Variety of sizes to accommodate different cable routing requirements
- Uses standard tie-wraps
- Lightweight and Durable
- Replacement for aluminum Z-brackets
- Cost-Effective

Product Description

Designed to secure and guide wire bundles throughout the aircraft, Amphenol Pcd's Raceways were designed with lean manufacturing and durability in mind. Built in a one-piece, lightweight design with multiple fixing points, our raceways are strong, durable, and make wire bundle installation and maintenance easy. Our Harness Supports were developed to secure large bundles and high loads, while our Hat Supports were developed to support a wide range of load requirements. Our Spacer Strips were designed to separate wire bundles a specific distance from one another, while our low-profile Tie-Down Strips secure bundles directly to the structure.

Material Specifications		
Material	Temperature Range	Flammability
Polyamide 6/6 (Nylon)	-55°C to 150°C	FAR 25.853

Technical Specifications		
Parts	Application	Maximum Weight
Harness Supports	To accommodate large bundles and high loads	27.3 g—72.6 g (0.06 lbs—0.16 lbs)
Spacer Strips	To separate wire bundles a specific distance from one another	n/a
Hat Supports	To accommodate a wide range of load requirements	32.9 g—65.7 g (0.72 lbs—0.145 lbs)
Tie-Down Strips	To fix cables directly to the structure (low profile)	n/a
